Education

Drexel University

Master of Science in Computer Engineering

Philadelphia, PA

September 2025 – Present

Drexel University

Bachelor of Science in Computer Science

Philadelphia, PA

September 2020 – June 2025

Experience

Modern Signal

Software Developer (Contract)

Philadelphia, PA

May 2026 – Current

- Redesigned front-end and introduced new back-end functionality to .NET apps with AI (Claude/Copilot) and Figma using MCP
- Designed system to convert internal ticketing system to Jira

Independence Blue Cross

Application Developer (Contract)

Philadelphia, PA

August 2025 – January 2026

- Implemented full-stack enhancements to a Flask application, introducing query result limits to improve performance, scalability, and API responsiveness
- Designed and built cloud data infrastructure in BigQuery using provided data mappings, with a focus on Type 2 slowly changing dimension (SCD) logic to accurately track historical data changes
- Automated data pipeline maintenance by extending shell scripts and SQL queries to integrate new data sources into downstream reporting workflows

Susquehanna International Group

Software Engineer Co-op

Bala Cynwyd, PA

SFG Team | C#, .NET Framework, MySQL, OracleDB

September 2023 – March 2024

- Enhanced data cohesion and accuracy of stock data by developing a C#/.NET API to aggregate data from 15 MySQL and OracleDB sources
- Decreased redundant data fetching by 93% by redesigning a web app to use a central API
- Reduced stock information lookup time by 95% by introducing a caching mechanism, improving system scalability and responsiveness

MDF Metadata Team | Django, Python, Linux, MySQL, PostgreSQL

September 2022 – March 2023

- Improved infrastructure observability by developing SQL-based monitoring scripts with PostgreSQL and Python to track file delivery integrity and timeliness in a production Linux environment
- Reduced alert configuration time for developers by 50% by creating a CLI tool that streamlined setup of monitoring and alerting workflows
- Improved a file-user identification tool by implementing multiple detection methods and custom SQL views and subqueries, resulting in more reliable attribution of file usage

CorpSys Team | C#, .NET, MicrosoftSQL, EntityFramework

September 2021 – August 2022

- Enriched an internal project management tool by aggregating developer, stakeholder, deployment pipeline, and environment data using SQL joins and stored procedures to improve team collaboration and project tracking
- Improved query performance by 20% by reducing the use of bridge tables in MicrosoftSQL by using LINQ with EntityFramework
- Developed the front-end interface for an API to allow general-purpose alerts to be created

Projects

Drexel Course Scraper | Python, FastAPI, SQLite, Playwright, BeautifulSoup

- Scraped and parsed metadata for over 8,200 courses from Drexel's public courses page using a custom **Python** scraper with **Playwright** and **BeautifulSoup**
- Designed API to be able to grab data via command line and Discord Bots

Skills

Languages: Python, C#, C, C++, Bash/Shell Scripting, SQL, HTML/CSS, JavaScript

Frameworks: FastAPI, Django, Flask, BeautifulSoup, .NET Core, .NET Framework, Entity Framework, jQuery

Tools: Docker, Kubernetes, Git, CI/CD (GitLab), Jira, Confluence, CMake, YAML
